New modern technologies, English language arts classroom

In the Headquarters of the United Nations in New York as an official document of the 75th session of the UN General Assembly spread in six official languages the information material on the raise of the political and legal culture of the population in Uzbekistan. It notes that one of the most necessary conditions for building a democratic state of law and open civil society in our country is the highest level of legal culture.

The country has developed and refined legal instruments to reach a high legal culture of society across the country, in which the active participation of government bodies, educational institutions, the National Centre for Human Rights and civil society institutions. It also noted that in this field formed the legal framework, in particular, the acceptance of a national program to develop the legal culture in society, the National Program for training, education laws and guarantees of the rights of the child and other regulations. [1,1]

The document emphasized, that a significant place in the system of legal education is given to the education of law-abiding and comprehensive progress of the younger generation. At the same time, gradually enhancement of organizational and legal measures provides improving of training system and development of legal personnel. Special attention is paid to the retraining and advanced training of teachers in this field, as well as creating them meet modern requirements and standards of textbooks, teaching materials. Preparation of meeting modern requirements of legal personnel is one of the objectives of judicial reform, the successful implementation of which will ensure protection of rights and legitimate interests of citizens.

Technology is an ever-increasing part of the English language arts classroom. Today's teachers are developing new and exciting means of integrating language, writing, and literature with innovative technologies. [2,2]

Let's discuss new modern technologies in teaching English. As for us we use our personal laptop to do our lessons interesting and to attract students to learn English. We watch video, listen to audio files, and discuss presentations. New technologies are certainly great teaching tools. We personally started using our laptop and video projector this year and we realized that that benefited us and our students. Our work has become more interesting, easier and cleaner.

Chalk and talk everybody turns our classroom into a boring place for us and our students.

With the new technologies our students are more interested in attending our classes. The new technologies have made our work easier too. As an example, preparing visual aids and showing them is no more hard work. There are lots of readymade pictures on the web that we can edit and present effectively using MS PowerPoint. Our work has also become cleaner. Now we have a white board and a laptop. The dusty days are to dust.

We usually start our lessons with presenting new language items using pictures or videos. Then we move on to a practice stage. The practice stage-is usually a listening activity or reading activity. During a listening or reading activity the students listen to or read a text or dialogue and do some exercises. The questions are displayed using PowerPoint and the students come and use our laptop keyboard or another keyboard connected to my laptop and answers the questions.

What the student writes is displayed on the screen. We no more use a blackboard.

With the developing technologies in the first decade of the 21st century,internet has opened limitless possibilities for us to use it in education where cyberspace is in everywhere in our lives. Now world is talking about Web 2.0 technologies. A new trend in web is designed and development, which aim to facilitate creativity, collaboration and sharing between users. There are a lot to benefit from these tools if you are already using internet and computers in your classes. Blogging, wikis, podcasting, digital storytelling, shared bookmarking.

The influence of technology on the productive skills of speaking and writing is, arguably, less. If you wish to improve fluency, many students would argue that nothing is better than a face-to-face language lesson, a discussion class with the teacher.

We are technology leaders and we exercise it daily with our students and also to prepare our classes. However, we have felt that many times teachers use technology without actually exploring the real relevance of what they are teaching. Using technology just because it's a trend does not lead the teacher to a successful and effective class. Technology is an ever-increasing part of the English Language arts classroom Today's teachers are creating new and exciting means of integrating Language writing and literature with innovational technologies. The progress and growth of Technology in Higher Education is important and it can be measured in terms of the perfect output in research - teaching - research cycle leading to social converting. [3,3]

The whole objective of education in Uzbekistan is to evolve and raise the capacity of human resource and progressively turn into an intelligent society. Every Nation wants to produce students who ultimately become the knowledge workers in thier own economy to be global citizens. In the 21st Century, the need for competitiveness, in the field of Higher Education knows no bounds.
