

THE IMPORTANCE OF SCIENCE AND ENLIGHTENMENT TODAY

Ulugbek Musinov,

Supervisor: Uzbek State Arts and
A teacher at the Institute of Culture

Student Pulatov Bekzod

Student: 2nd year "Puppet Theater Acting"

Annotation: This article contains many ideas aimed at developing the Uzbek State Institute of Arts and Culture, strengthening the knowledge of students, increasing their interest in science, in particular, their place in society, the future of the country. It is not surprising that this article will be of some use to them.

Keywords: Knowledge, science, plans, society, material and technical base.

Today, Uzbekistan is one of the most developed countries in the world through changes in all spheres, which is the result of a prudent policy pursued in our country. In particular, we can see a clear example of the results of the efforts being made in all regions of Uzbekistan, which are being renewed.

It should also be noted that the active relations with other countries, agreements in various fields, as well as underlying them, are intended to create ample opportunities for our young people to get an education and acquire knowledge. Because the more the young people in our society strive for knowledge, the more they thirst for knowledge, the more they demand science, the better the future of the country will be.

But if you look at the achievements of most of our young people today, you will be happy, but on the other hand, you will regret that some young people are wasting their time. Therefore, we need to increase the interest of our young people in education.

I believe that most of the educated young people, rich in the modern worldview, have studied the rich scientific heritage of our ancestors who lived and worked before them. Consider these four:

I hit my head in search of knowledge,

I didn't waste my life this time.

Wherever I hear knowledge,

I sat firmly under the door.

In these verses of Nasir Khusraw, we can see that man should strive not to waste his precious and precious time and life, to acquire new knowledge and to choose the right path.

The same attention is paid to our youth in the politics of our country. We can see that 2021 is the Year of Youth Support and Health Promotion. In addition, the President of the Republic of Uzbekistan said at a meeting with young people on December 27, 2019 at the "School named after Muhammad Al-Kharizmi": "We have big plans, know one thing, if you do not have the strength of enthusiastic young people, if you do not express your views in all areas, we will not be able to fulfill our plans, because you have a lot of strength, you have a lot of inspiration, you have a lot of plans.

Tomorrow, the peace, tranquility, development of our homeland and the whole world depends on Uzbekistan. If we implement these plans together with you, in consultation with you, these recommendations will surely come true," he said. In his Address to the Oliy Majlis in 2019, he echoed the words of Eastern scholars on education: "The greatest wealth is intelligence and knowledge, the greatest heritage is a good upbringing, the greatest poverty is ignorance.

In conclusion, for all of us, the study of the sciences of our ancestors, the acquisition of their knowledge, the acquisition of true enlightenment and high culture, should become a continuous vital necessity, because it has been said that the career of science is the best of careers. If there is faith and enlightenment on the earth, then that land is a place of happiness, and where there is ignorance, it is like a dry or rocky place.

Science, combined with good behavior, makes people happy and elevates their careers, and the purpose of science is to do good and noble deeds. Ignorance is like a limb without a limb, the limb without a limb is not touched, knowledge increases a person's rank, and ignorance degrades a person, a knowledgeable person speaks the right word, burying the unnecessary word.

If a person does not illuminate his path with the light of knowledge, he will remain in the path of darkness and ignorance, because the light of the human heart will be strong with knowledge and enlightenment, and the value of man will be formed with knowledge. No one is harmed, and the acquisition of knowledge is an art. So no matter what field we are in, if we young people bring our knowledge and knowledge into an art field, if we don't develop the art we are learning, this art will benefit us when we find our place in society.

So let's increase our youth art by learning about it. Because in the future, the knowledge we learn will lead us to great heights in the field of art. President Shavkat Mirmonovich Mirziyoyev also paid great attention to culture and art in the 2020 Address.

His attention is paid to the issues of further enhancing the cultural and educational life of our people, revitalizing the activities of cultural and art institutions, strengthening the material and technical base, building a complex of culture and enlightenment, including the Alisher Navoi International School of Creativity. very inspiring.

Ibn Mas'ud says, "It is science to know what man does not know," because man knows what he does not know, and seeks to correct and learn. The study of science is not unique to the school period, the school gives man the key to he opens himself, does what he does with his own zeal, and makes a big mistake when he throws the book into a corner as soon as he finishes school.

However, there is no age, no time, no place for education, it is studied at any age, everywhere. Science is the greatest investment, man at any age, everywhere, at any time, wants to increase his investment.

In short, educate yourself with science, maybe you will face problems, some difficulties, but remember that nothing of value is easily obtained, so let's strive hard to acquire knowledge, young people.

Let's work on ourselves independently, let's search, let's work harder, and if we have a chance, we will see the results of our work in the future. Let's not betray the investment that our parents made in the future. In order not to be ashamed in front of our family, our society and our homeland, so that our future is bright, let us not stop looking for knowledge, because the knowledge acquired in youth is like a pattern carved in stone, knowledge success is ignorance. and let us not forget the defeat.
